Juked

A REAL-TIME COLLABORATIVE MUSIC SHARING DJING APPLICATION

FOR ALL OF YOUR REAL-TIME COLLABORATIVE MUSIC SHARING DJING APPLICATION NEEDS

TO USE WITH ALL OF YOU REAL-TIME COLLABORATIVE MUSIC SHARING DJING APPLICATION FRIENDS

sponsored by Altoids

That's what I like to hear!

Goals:

- Juked will serve as a Spotify medium for the purpose of music collaboration.

- Be it a pool-party, social gathering, road-trip or any other event where music is a *must,* Juked will allow users to add music to a collaborative playlist

- Pushed to the top through a vote system.

- Each user will connect using a lobby code and will be able to select music from Spotify and queue it in the party lobby.

Challenges:

- Spotify : Asynchronous HTTP request.

- Firebase: Learning from the scratch.

- Android: Implementing view adapter and UI in general.

- Android: Android SDK and Java overall.

- Github: Updating creating new issues.

"I'll just delete this, I'm sure that won't cause any problems down the road"
- Juked motto

Lessons Learned

❖ Updating from Github.

❖ Working with Spotify API

❖ Firebase installation and usage

❖ Android SDK

❖ Java

Start early, be consistent in work-flow, & be flexible & ready to adapt as requirements shift

improvise adapt overcome
